

Affective profile: Lithuania vs Germany

Country means on the ten first-order DisInforMeter constructs (left) and the five higher-order affective domains (right). LT solid; D dashed.

First-order beliefs (10 axes)

Higher-order domains (5 axes)

 Germany (S3)  Lithuania (S2)

Lithuania (S2, n = 582) vs Germany (S3, n = 782). LEFT: ten first-order DisInforMeter constructs, arranged clockwise by parent composite (Threat → Betrayal → Fear → Foreign-power admiration). RIGHT: five higher-order affective domains (Threat, Betrayal / abandonment, Fear / pragmatism, Foreign-power admiration, General disinformation acceptance); foreign-power admiration pools the Russia and China affective anchors. Both radars use a 1–7 scale (centre = 1, perimeter = 7); the dotted mid-point ring sits at 4. Comparable under partial metric invariance (S2 $\longleftrightarrow$ S3 ladder). N = 1,364.
