

How much FIMI variance does each model explain? (R²)

Higher-order composite SEM (one row per study × FIMI variant). Bars show R² (proportion of FIMI variance explained).

Cells show the variance in FIMI explained by the higher-order composite (COMP) SEM in each study × operationalisation. One lollipop per cell; bars start at zero. Y axis grouped by FIMI variant, then study (S1 → S4). N = 16.
