

Country response profiles — regional vs emergent grouping

Both panels show the same country × predictor posterior-mean matrix from the 08b Bayesian multilevel fit. Comparing the two reveals whether the canonical regional grouping (left) predicts the structural-path profile (right).

Sorted by regional cluster

Baltic · Central-East · Southern · Western

	Threat	Betrayal / abandonment	Fear / pragmatism	General anchor	Foreign-power admiration
Lithuania	+0.10·	-0.12*	+0.19*	-0.27*	-0.09
Latvia	+0.04	-0.08	+0.19*	-0.20*	-0.14·
Estonia	+0.05	-0.08	+0.15*	-0.15	-0.20*
Hungary	-0.02	+0.05	+0.20*	-0.16*	-0.15*
Bulgaria	+0.09	+0.00	+0.26*	+0.00	-0.17*
Poland	+0.01	-0.03	+0.25*	+0.02	-0.17*
Turkey	+0.28*	-0.11·	+0.20*	+0.13·	-0.09
Italy	+0.03	-0.03	+0.24*	-0.07	-0.14*

Austria	+0.13*	-0.14*	+0.24*	+0.10	-0.14*
Germany	+0.19*	-0.13*	+0.22*	-0.10	-0.08
Belgium	+0.17*	-0.09	+0.28*	-0.01	-0.07
France	+0.07	-0.02	+0.27*	-0.03	-0.17*

Sorted by emergent response profile

Ward.D2 hclust on standardised posterior means; k = 4. Cluster names = strongest mean predictor.

Country response profiles. Each cell shows the country's posterior mean standardised β for predictor → FIMI from the Bayesian multilevel model (08b). Asterisk = 95 % CrI excludes zero; mid-dot = 90 % CrI excludes zero; red outer ring = ML estimate outside pooled PI95 (candidate for individual scrutiny). LEFT: countries grouped by the canonical regional cluster (Baltic / Central-East / Southern / Western). RIGHT: countries grouped by Ward.D2 hierarchical clusters on the standardised five-predictor posterior profile; cluster names are the strongest mean predictor in each emergent group. Cell colour: blue = negative β, red = positive β, symmetric around 0. N = 65.
